

## PCR AND PANDEMIC v1 2020 10 04

### A) CONCLUSIONS

Simply stop testing and start counting

1. how many admitted to hospital each day with CV19
2. how many admitted to hospital in total each day.
3. how many beds in hospitals
4. how many beds in hospitals occupied each day.
5. how many die of or with CV19 each day
6. List how many died each day from all other causes.

It really is that simple to expose what is going on.

### B) HISTORY LESSON BY VIDEO

“Another well-presented video highlighting the Covid scam technique. He's not really saying anything new, but he's someone our more 'woke' friends might watch?”

<https://youtu.be/Ljxah4NrYKU> By Spiro Skouras

### C) Dr Kary Mullis & Dr Thomas Cowan

Dr Kary Mullis - Nobel Prize Winner and an American research Chemist who invented The PCR test.

A minuscule amount of anything can be discovered by PCR.

The measurement of the PCR is not exact.

PCR does not tell you that you are sick or have any disease.

PCR is a test that takes a very little of something and makes much more out of it by magnifying through cycles especially over 30.

He used the test to establish that HIV was the cause of aids.

Dr Kary Mullis, an American, died in August 2019. He was very outspoken on Fauci and his colleagues. “They are arseholes”.

The timing of the death of Mullis raises suspicion.

A Case of Covid19 is a positive detection of disease. Boris wrongly calls identifying the virus whether dead or alive, a minute amount or more, a Case!!! A positive test is not proof of a disease. It is a surrogate test. It means not testing on causation. You cannot use it for diagnoses. There is no gold standard for Covid.

### **Cycles of Tests**

Mullis stimulated the growth cycles of the test. 30 cycles are essential, the more cycles then the more that you see the virus. At 36 cycles you see the positive result. At 40 you get much more. If you amplify it 50 times 100% become positive.

Therefore there are many ways to get to false positives.

Get worse results to produce alarm and fear. Then, raise the cycle numbers.

Get more fear. Impose Controls.

Then get better results as the controllers lower the cycle numbers. Useful to prove lockdown works and also eventually that a vaccine works!

Each country has their own test cycle numbers.

There is therefore no comparison possible.

Hence says Dr Cowan said that you can control the cycles and then by reducing the cycles you get the results that the controllers seek.

**So we are unable to tell whether people are infectious or infective using the PCR test.**

The amplification causes functional false positives as the asymptomatic are not infectious and so there is no value in quarantine. Hence no one who understands this will wish to cooperate with test and trace.

So no cooperation is wanted by most people who know that the PCR test is an inapplicable test being used as a means to control the people. It is all about CONTROL

I have the thought that none of this would be possible if Dr Mullis was alive. How convenient that he died in August 2019 at just the right time for the PLANDEMIC to be commenced.
