

MY THOUGHTS ON COVID

ROGER WRIGHT MORRIS - 6 January 2021 at 09:49

Real data of cases with symptoms show that there is no rise since June 2020.

Covid is real but whilst endemic there is no epidemic.

The rise in alleged but not real illness is a result only of the false positives due to the absence of any gold standard test. The alleged Covid rises are a result of fear and panic caused by government relying on PCR false positives.

The greater use of the more accurate lateral flow test will assist in reducing the false figures but that too has false positives.

Dr Kary Mullis said firmly that you need to see symptoms first for diagnosis and then use this very sensitive test as an aid to a diagnosis of the symptoms.

Kary Banks Mullis (December 28, 1944 – August 7, 2019) was an American biochemist. In recognition of his invention of the polymerase chain reaction (PCR) technique, he shared the 1993 Nobel Prize in Chemistry with Michael Smith^[4] and was awarded the Japan Prize in the same year. His invention became a central technique in biochemistry and molecular biology, described by *The New York Times* as "highly original and significant, virtually dividing biology into the two epochs of before PCR and after PCR."^[5]

Editor

Lockdown Sceptics regular Dr Clare Craig has gathered all this data together in one place and added a commentary [explaining what it means](#). She says:

One thing that Public Health England has been world beating for before and during this pandemic has been the sharing of data. Data is collected from every aspect of the healthcare system and we now have the full dataset for 2020. The beginning of the graphs therefore give an indication of the levels expected at this time of year.

A selection of this data is presented that tells the story of a Spring pandemic. However, what this data reveals about Autumn and Winter does not fit the hypothesis that there has been a second wave. PCR testing results are an outlier in the data and only data related to PCR test results has led to the impression that there is currently a Covid problem."
