Amazing. !

So as there is no Covid gold standard test and as the PCR is useless for diagnosis then PHE says that Covid is just another flu virus.

Please may we all stop the lockdown panic and get back to earning a living especially in music, the arts and about all education and all other leisure businesses.

Weekly Coronavirus Disease 2019 (COVID-19) surveillance report Summary of COVID-19 surveillance system

Year: 2020 Week: 40

This report summarises the information from the surveillance systems which are used to monitor the Coronavirus Disease 2019 (COVID-19) pandemic in England. More information on the surveillance systems are available [here](#).

The report is based on data from week 39 (between 21 August and 27 September 2020) and for some indicators data up to 29 September 2020. References to COVID-19 represent the disease name and SARS-CoV-2 represent the virus name.

Data is reported from week 27 (week beginning 19 June 2020) onwards. For reports with data prior to week 27, consult previous reports [here](#).

This will be the last COVID-19 surveillance report, as of 8 October 2020, the information in this report will be published in a combined Weekly flu and COVID-19 Surveillance Report on GOV.UK.

Summary

Several surveillance indicators suggest that COVID-19 activity at a national level has continued to increase during week 39.

- There are several indicators that combine to provide a picture of the number of COVID-19 cases and trends over time, of which cases reported is just one.
